## EDUCATION

University of Illinois at Urbana-Champaign

Bachelor in Science (Computer Science) with a Statistics minor - **3.86 GPA**

Fall 2021 - Fall 2024

Urbana, United States

## COURSEWORK

- Machine Learning
- Database Systems
- Android Applications
- Blockchain
- Full Stack Dev
- System Programming
- Computer Architecture

## TECHNICAL SKILLS

**Languages:** Python, Java, C++, Haskell, SQL, HTML5/CSS3, Verilog, MIPS Assembly, Bash

**Technologies/Frameworks:** Linux, Git, React, AWS/GCP, Android Studio

## WORK EXPERIENCE

Disruption Lab, Duration: 3 months

2023

*Intern, Software Engineer*

Champaign, Illinois

- Implemented a **DAO** (decentralized autonomous organization) using the **Aragon SDK**.
- Tokenized natural resources (nickel, copper, iron) via a new **cryptocurrency** called *Kula*.

Sellou, Duration: 3 months

2023

*Intern, Software Engineer*

Tokyo, Japan

- **Full-stack development** of a social-media **android app**.
- Utilized **Firebase** for back-end development and **React-Native** for front-end development.
- Implemented User-credentialing via login and signup forms.
- Created a dynamic feed of videos for a specific user.
- Implemented liking, commenting, and posting abilities for each user.

Centelon IT Solutions, Duration: 3 months

2022

*Intern, Software Engineer*

Mumbai, India

- Created an image **web-scraper** to collect images of credit cards using Python's **Selenium** Library.
- Researched on developing a **Generative Adversarial Network** (GAN) to generate Credit Card images using **machine learning**.

## PROJECTS

### Mood Music AI

- Utilized the **Wav2Vec2** model to create a web-app for users that want to listen to 'mood' based music.
- Users could upload an audio file or record their voice, and the model would determine the user's emotion.
- Based on this mood, a playlist was made using the **Spotify API**.
- Also wrote middle-ware to manage the processing of audio files through **Flask**

### Ascent Rock Climbing Tool

- Designed a rock-climbing tool that measured grip strength and other metrics for a rock-climber.
- Ran a **server** on an Arduino D1 mini **microcontroller** which received data from a muscle sensor.
- Designed the webpage that received and displayed the processed data for the user.

### FridgeBot

- Designed and created a device that yelled at the user if a fridge door is left open.
- Measured resistance values on a circuit using an arduino **microcontroller**.
- Program would play sounds if the resistance was .

### Community Detection

- Parsed a Stanford dataset of Github users (nodes) and who they followed (edges) to create a **graph** in C++.
- Used the **Girvan-Newman algorithm** to create **communities** of users, based on mutual followers.
- Used **Dijkstra's algorithm** to find relationships between any two users that have a mutual follower.

### Course Recommendation

- Created and designed a course recommendation website in **Flask**.
- Rated a student's selected courses based on the professor, total credit hours, and the student's schedule.
- Wrote functions to fetch data from the professor's RateMyProf webpage using **beautifulSoup**.
